# Web redesigns

Sometimes a portal just needs a fresh layout (more modern, simpler), sometimes it also needs to be improved. UX (user experience) is the science that studies interaction between web sites and their visitors. Usability is part of any successful and easy to use web site, so let us contribute to a better world wide web by requesting an usability study or UX improvements for your web site.

# Web designs from scratch

We start with a documentation process: search for suitable layouts and proper colour schemes. We carefully read the project's brief. And if the client doesn't have yet a clear image of the overall layout, we build for them the information architecture of the new portal.

Then we make a digital prototype and let clients tell us what they think about it. Together we propose changes, in order to fit our solution to all client's needs.

Implementation is the hardest part, but we successfully deliver it in time and for any major modern browser.

## National Strategy

### Objective 1: Identify and monitor priority components of biodiversity in Belgium

In principle, the entire wealth of biodiversity should be subject to protection. It is however not feasible to concentrate efforts on all the elements of biodiversity. The Strategy will therefore focus the efforts where they are most needed, i.e. on components of biodiversity that are most at risk, or could be subject to high risks in the near future. Priority components of biodiversity requiring the most urgent protective measures must be identified and their status monitored. Priority components of ... [show more](#)

**DIGITAL AGENDA FOR EUROPE**  
A Europe 2020 Initiative

## Digital Agenda Data

The present visualisation tool allows you to explore some open datasets through the interactive creation of charts and tables. The charts you create can be exported as images, printed or shared through hyperlinks. You can download the data behind a chart or the entire dataset, including the metadata providing labels, definitions, methodological notes, references and sources. Use the "download" and "export" buttons present on each chart, or refer to the page "Entire dataset metadata and download services".

Each dataset is stored in a semantic data repository to facilitate their reuse and the linking to other data published on the web. For browsing or querying of the semantic repository please follow the [link](#). You will find functionalities for human and machine reading of data and metadata. The [documentation page](#) presents some reports and notes about the technical characteristics of the project developing the present visualisation tool and semantic repository.

### Please select one of the available datasets:

#### 1. Digital Agenda Index (Test)

- Consult the list of indicators, their definition and sources
- Entire dataset metadata and download services

#### 2. Digital Agenda key indicators

European Commission services selected around 100 indicators, divided into thematic groups, which illustrate some key dimensions of the European information society (Telecom sector, Broadband, Mobile, Internet usage, Internet services, eGovernment, eCommerce, eBusiness, ICT Skills, Research and Development). These indicators allow a comparison of progress across European countries as well as over time.

## 2014–15 Campaign: Healthy Workplaces Manage Stress

The 2014–15 Healthy Workplaces Campaign has three key objectives: (1) to raise awareness and improve our understanding of stress and psychosocial risks in the workplace; (2) to provide guidance, support and practical tools for managing risks; and (3) to highlight the benefits of managing psychosocial risks for workers and businesses.

Psychosocial risks can be assessed and managed in the same systematic way as 'traditional' workplace risks. This is the main message of the [2014-15 Healthy Workplaces Campaign](#).

### Rationale

Why is this campaign so important?

There is a lot of misunderstanding around psychosocial risks in the workplace and a [stigma](#) remains around mental health problems. [Surveys](#) suggest that many employers believe that psychosocial risks are more difficult to manage than 'traditional' workplace risks. They may feel that an employee's mental health is too sensitive an issue to raise or that they don't have the necessary expertise.

This campaign sets out to bridge the gap between misunderstanding and reality by providing information and practical support.
