Web designs from scratch

We start with a documentation process: search for suitable layouts and proper color schemes. We carefully read the project's brief.

And if the client doesn't yet have a clear image of the overall layout, we build for them the information architecture of that new portal.

Then we make a digital prototype and let clients tell us what they think about it. Together we propose changes, in order to fit our solution to all client's needs.

Implementation is the hardest part, but we successfully deliver it in time and for any major modern browser.

EEA Signals 2013 - Every breath we take

Apr 15, 2013

Improving air quality in Europe: Signals 2013 focuses on Europe's air. This year's edition tries to explain the current state of air quality in Europe, where they come from, how air pollutants form, and how they affect our health and the

What is InforMEA?

InforMEA harvests COP decisions, news, events, membership, national focal points and reports from MEAs. Information is organised by terms from MEA COP agendas. InforMEA is a project of the MEA Information and Knowledge Management (IKM) Initiative with the support from the United Nations Environment Programme (UNEP).

INDICATORS

1 to 20

21 to 40

41 to 60

61 to 80

81 to 97

Goal A: Address the underlying causes of biodiversity loss by mainstreaming biodiversity across government and society

- Target 1 ◦ Target 3
- Target 2 ◦ Target 4

Target 1 : By 2020, at the latest, people are aware of the values of biodiversity and the steps they can take to conserve and use it sustainably.

Mapping with National strategy:

None

Most relevant indicators:

- Indicator 66: Trends in awareness and attitudes to biodiversity
- Indicator 67: Trends in public engagement with biodiversity
- Indicator 68: Trends in communication programmes and actions promoting social corporate responsibility

Other relevant indicators:

- Indicator 73: Trends in implementation of National Biodiversity Strategies and Action Plans, including development, comprehensiveness, adoption and implementation
- Indicator 75: Trends in identification, assessment and establishment and strengthening of incentives that reward positive contribution to biodiversity and ecosystem services penalize adverse impacts

Home At a glance What can it do? Country portals Create your own

The WatSan Platform enables African countries to rapidly set up a free database and website for monitoring water and sanitation services. Web portals created on the WatSan Platform are participatory tools for information dissemination in the water and sanitation sector at national and regional level. They can be used to generate maps which highlight the distribution of water and sanitation services.

▶ Know more

What can it do ?

Inform citizens on access to water and sanitation in their regions, districts and villages and gives them the opportunity to express their opinions and to update information on services

▶ Know more

Create your portal

The WatSan Platform is open to all countries who wish to develop a collaborative information system to improve governance and decision-making in the water and sanitation sector by putting databases and performance information online.

ENISA – Securing Europe's Information Society

Every day we experience the Information Society. Interconnected networks touch our everyday lives, at home and at work. It is therefore vital that computers, mobile phones, banking, and the Internet function, to support Europe's digital economy. That is why ENISA is working with Network and Information Security for the EU and the Member States.

[Links](#)
[Sitemap](#)
[Concepts and Methods](#)
[Country case studies](#)
[European level](#)
[Global level](#)
[Events](#)
[BISE](#) » [Ecosystem assessment platform](#)

Welcome to the ecosystem assessment platform of the Biodiversity Information System for Europe.

The platform aims at facilitating the planning and development of ecosystem assessments in Europe by facilitating information sharing.

The targeted audience comprises experts involved in planning or shaping ecosystem assessment at national, subnational or European scale, in policy bodies and research organisations.

Currently, the platform introduces the main sources of information on the concepts and methods that are useful for conducting an ecosystem assessment, it informs about some case studies in Europe, and it also provides an updated list of related events.

This platform does not present any formal opinion of EEA, its member countries, or other contributors.

Ongoing surveys

To further feed this platform, the EEA is currently undertaking two surveys:

- A survey to review the needs and potential contributions from all users. This survey is available on line. Your feedback will help us define the scope and structure for a virtual library, in order to provide a more comprehensive and indexed collection of documents that are relevant for developing ecosystem assessments in Europe.
- A survey to document policy instruments for ecosystem based management in countries. [More info](#).

Context

The Millennium Assessment (MA), and the study on the economic significance of the global loss of biological diversity (TEEB), have highlighted that ecosystems are being degraded and that these degradations have major socio-economic effects. These degradations are further predicted to worsen.
